

# It's Time to Secure Your SaaS Data

Strengthen your SaaS security posture, manage risk, and accelerate the pace of innovation with AppOmni and PwC. Together, AppOmni and PwC can help you secure your SaaS applications by mitigating risk from security posture misconfiguration and over-provisioned user access, along with managing compliance requirements.

## The Challenge

The world is different than it was pre-COVID, and so is the risk environment in which organizations operate. Change is fast and disruptive.

In this turbulent business environment, many executives need to revise and adapt their strategies and operating models at a rapid pace. They know that capturing opportunity and avoiding disruption requires speed. While managing disruptions, organizations are simultaneously dealing with internal digital transformation challenges, and how to bring along internal stakeholders as they automate business processes and drive digital into everything they do.\*

## The Solution

Enterprises need a new approach that provides visibility into the security of their entire stack of SaaS applications, where business automation and digital transformation now live. The ideal solution should anticipate threats, and leverage the latest controls and security features without adding additional workload or requiring new in-house expertise. It must also offer a quick and simple path to remediation and integrate seamlessly with existing processes and technology.

AppOmni and PwC have collaborated to help organizations identify, centralize, and automate SaaS security. AppOmni makes it easy for enterprises to achieve visibility while protecting and monitoring their critical SaaS applications. PwC leverages AppOmni SaaS security to deliver a holistic and efficient compliance program that focuses on the risks and configurations that are most critical. Together, PwC and AppOmni help enterprises manage SaaS security risk, streamline DevSecOps initiatives, and free up IT, development, and security personnel to focus on core business tasks.

### AppOmni Solution Overview

The AppOmni SaaS security platform enables companies to improve the security of their SaaS data while decreasing the workload of security and IT teams. Our solution delivers centralized visibility, unmatched data access management, automated workflows, and security controls that integrate seamlessly into any SaaS environment to secure sensitive data.

## PwC Professional Services Overview

PwC brings unique intellectual property and experience. It can help you accelerate your SaaS security by giving you the ability to gain visibility, integrate security into SaaS SDLC, and achieve immediate risk reduction within your SaaS environment while enabling secure business expansion. PwC can also help you support secure operations by providing remediation guidance of AppOmni findings.

### PwC Value-Added Services Include:

**SaaS Security Diagnostic:** Gain security insight as part of your implementation or transformation initiatives. This allows you to quickly understand the current SaaS security posture and define a strategy that can lead to a mature SaaS security posture.

### SaaS Security Implementation:

- **Governance** - Establish an operationalized SaaS program and governance model that leverages the full potential of AppOmni. Processes to identify and track security findings, roles and responsibilities, and standardized and repeatable reports and dashboards will be defined to proactively address any potential security risks.
- **Implementation approach tailored to your individual needs** - Leverage AppOmni's Universal Application Framework to develop customized capabilities that help your individual needs and risk profile.

**Security Remediation:** Remediate observations identified through the diagnostic or through the implementation of the application framework. Our team will collaborate with you to address your security findings and help you to better align with leading practices, which will enable you to meet your regulatory and operational requirements.

**Managed Service for SaaS Security:** Utilize a reliable and economic approach to operating the SaaS security program, after SaaS security implementation. PwC's existing Managed Service offering engagement model and team provides proven results that can relieve your team from operational overheads.

## About PwC

At PwC, our purpose is to build trust in society and solve important problems. Our experience includes more than 300 successful integrations, with teams who have operated in some of the largest and most comprehensive identity and access management and privileged access management implementations in the world. PwC has been rated as a Leader in Global Cybersecurity Consulting Providers by Independent Research Firms, as well as in The Forrester Wave™: Global Cybersecurity Consulting Providers, Q4, 2021. ## AppOmni Key Features

- Identify application misconfigurations and policy violations
- Secure any app with a normalized control framework
- Expand authentication, UI, and APIs to create custom monitored service types and ingest posture data
- Automate support for policies, compliance mapping, reports, and more
- Develop comprehensive policies and guardrails to prevent data exposure
- Manage 3rd party applications and OAuth grants
- Manage critical security settings, detect changes, and offer remediation suggestions
- Apply SaaS security best practices during pre-production
- Receive alerts for potential attempts to compromise sensitive data
- Access a real-time posture view of the SaaS environment
- Maintain visibility with continuous monitoring of SaaS security configurations
- Integrate with existing SIEM, SOAR, and collaboration tools
- Maintain compliance for SOX, SOC 2, ISO 27001, NIST CSF, NIST 800-53, APRA CPS 234, and more

## About AppOmni

AppOmni is the leading provider of enterprise-level SaaS security. Our patented technology and Developer Platform make it easy for security and IT teams to protect and monitor their entire SaaS environment across all standard and custom SaaS applications. AppOmni deeply scans APIs, security controls, and configuration settings to evaluate the current state of SaaS deployments and compare them against best practices and business intent. The result is unprecedented visibility, management, and security of SaaS solutions and data, including third-party applications, with continuous monitoring.
