Veeva Systems
Minimize Risk and Ensure Compliance

Organizations can enjoy the benefits of SaaS and better serve customers while knowing their SaaS environments and data are secure.

Veeva Systems is one of the most important SaaS platforms for many life sciences companies, and it frequently houses business-critical data. Security teams and Veeva admins alike need immediate, up-to-date, and comprehensive visibility into their SaaS applications. They also need to maintain appropriate data access for both internal and external users — such as vendors, customers, and partners — and monitor access of 3rd party application integrations connected to their SaaS environments.

AppOmni minimizes SaaS security risks by providing Security teams and Veeva admins with tools to effectively manage security across Veeva Vault and Veeva CRM, and all other SaaS applications.

Veeva customers can access AppOmni’s comprehensive configuration management and threat detection functionality, including essential capabilities for life sciences such as 3rd party app visibility, activity monitoring, and audit log normalization. As a Technology Partner, AppOmni is the first security vendor to support key Veeva applications and extend our posture management and threat detection capabilities to cover both Veeva Vault and Veeva CRM.
