

Secure What Matters Most in Workday

The Challenge

Workday powers critical operations—from HR and finance to planning and analytics—but its scale and complexity can create security blind spots. Misconfigured settings and over-permissioned users may leave sensitive data exposed. Inconsistent policies across modules make compliance difficult, while fragmented ownership can lead to unauthorized changes and overlooked misconfigurations. Enforcing security at scale remains a constant challenge without the right controls in place.

The Solution

AppOmni provides complete security for Workday, delivering comprehensive visibility into authentication controls, user access, and system configurations—without adding complexity.

With deep insight into Workday, teams can continuously monitor authentication methods, MFA enforcement, email delivery logic, and mobile access settings to identify misconfigurations and policy violations that could expose sensitive HR and financial data.

Granular analysis helps detect inconsistencies in access settings, risky delegation paths, and overly permissive configurations that might otherwise go unnoticed.

Continuous policy enforcement keeps your Workday environment aligned with best practices and compliance frameworks such as HITRUST and FIDO2, reducing the risk of configuration drift, insider threats, and user reconnaissance attacks.

Prevent SaaS Breaches

Recent incidents have shown how overlooked settings, weak authentication controls, or excessive access can open the door to threat actors. Workday environments are no exception. AppOmni helps security teams reduce risk by identifying misconfigurations, monitoring for drift, and enforcing strong policies that align with compliance frameworks and zero trust principles.

THE BENEFITS

- **Gain deep visibility** into authentication settings, access controls, and policy alignment across Workday
- **Identify misconfigurations early**—before they expose sensitive HR and financial data
- **Prevent drift** with continuous enforcement of security baselines and best practices
- **Detect risky behavior** including enumeration, bypass attempts, and anomalous activity
- **Streamline compliance** with automated checks for HiTrust, FIDO2, and internal policy requirements

KEY USE CASES

- Posture & Permissions Monitoring
- Identity & Access Control
- Threat & Anomaly Detection
- Third-Party Risk Management
- Compliance & Policy Enforcement

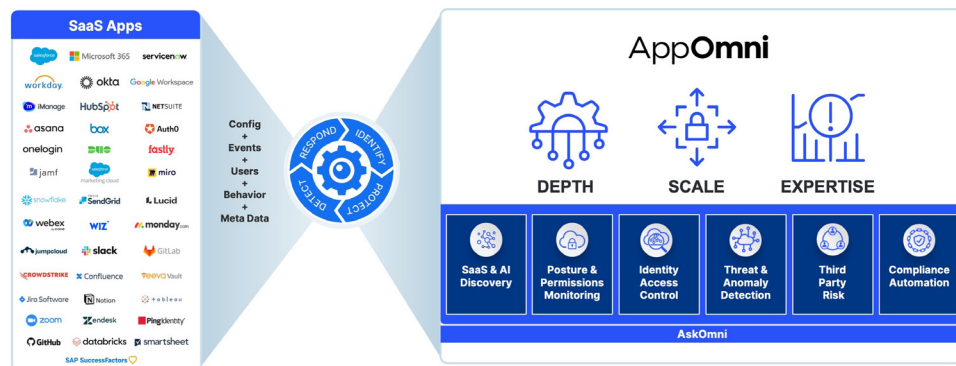

How AppOmni Prevents Workday Breaches

Security teams use AppOmni to operationalize Workday security with greater precision and less overhead. From detecting risky configurations to managing access and monitoring for threats, AppOmni helps organizations close critical gaps that traditional tools often miss. The examples below highlight how AppOmni enhances Workday security across multiple domains.

Use Case	How To Use It	Security Impact
Posture & Permissions Monitoring	Monitor configurations, access controls, and risky user conditions like stale guest accounts or bad email domains.	Reduce exposure by identifying misconfigurations and excessive permissions early.
Identity & Access Control	Enforce least privilege by identifying over-permissioned users, integration accounts, and inconsistent role assignments.	Limit lateral movement and reduce insider and account compromise risk.
Threat & Anomaly Detection	Detect anomalies like IP range changes, new API tokens, or impossible travel behavior.	Accelerate threat detection and response to minimize impact.
Third-Party Risk Management	Monitor and manage third-party connections to Workday.	Minimize integration risk and protect sensitive data.
Compliance & Policy Enforcement	Validate settings against HiTrust, FIDO2, internal security requirements, and more.	Streamline audits and reduce compliance risk.

Achieve Effective SaaS Security for Workday

Even the most well-managed environments can have hidden risks. With continuous monitoring and deep visibility, organizations uncover issues they didn't know existed.

“ Within WKDY, AppOmni identified a contractor with full admin rights to the entire system for a period of 6 yrs!

About AppOmni

AppOmni, the leader in SaaS Security, helps customers achieve secure productivity with their applications. Security teams and owners can quickly detect and mitigate threats using unmatched depth of protection, continuous monitoring, and comprehensive visibility. Trusted by the world's largest enterprises, AppOmni specializes in securing diverse SaaS environments. Learn more at appomni.com/critical-apps/workday-security © 2025 All Rights Reserved
