

Comprehensive Visibility and Control for Slack Security

The Challenge

Securing Slack requires full visibility into configurations, role-based access, and connected apps across all workspaces. With features like shared channels, guest accounts, and third-party bots, it's easy to miss access sprawl and misconfigurations. Without continuous monitoring or unified controls, a single oversight can lead to data exposure, compliance issues, or lateral movement across integrated apps.

The Solution

AppOmni helps organizations gain control over Slack's growing complexity. With deep visibility into configurations and access, teams can track permission drift, changes to roles, and workspace settings from a single interface. AppOmni continuously monitors your security posture and alerts on high-risk activities such as guest access, public file sharing, and admin privilege changes. Policy rules provide automated enforcement, while out-of-the-box reports show how users, roles, and apps are interacting across Slack.

AppOmni also tracks third-party app connections and their scopes, helping prevent risky OAuth integrations or shadow IT. With guided insights and a policy-driven approach, security teams can reduce manual effort, improve consistency, and scale Slack securely.

Prevent SaaS Breaches

Misconfigured Slack workspaces, risky bots, and broad access scopes play a significant role in SaaS-related data leaks. AppOmni monitors configurations, detects permission changes, and evaluates app risk to help prevent data loss and unauthorized access—before it turns into a breach.

THE BENEFITS

- **Continuously monitor** your security posture, permission drift, and entity creation
- **Gain a transparent view** of user permissions
- **Streamline access management** and simplify configurations to reduce third-party risks
- **Gain enhanced insights** across user groups and permissions through reports

KEY CAPABILITIES

- Deep Visibility Into Permissions and Drift
- Continuous Monitoring and Alerting
- Access and Activity Trend Analysis
- Third-Party Connection Oversight
- SaaS Security Policy Management

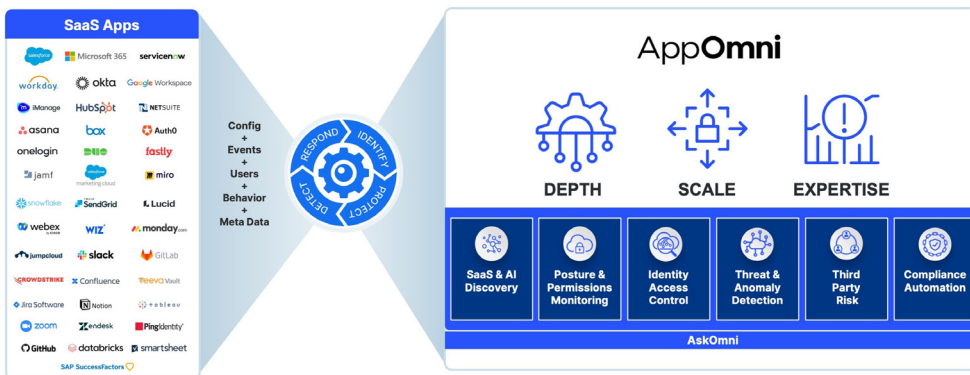

How AppOmni Prevents Slack Breaches

AppOmni provides unified visibility, detection, and control across Slack workspaces. By tracking posture changes, app activity, and user access, teams gain the insights to prevent threats and stay compliant. Security policies and automation help ensure Slack is both productive and protected.

Capability	Description	Security Impact
Deep Visibility Into Permissions	See user, guest, and admin access across all workspaces in one place.	Prevent privilege creep and flags risky access across Slack.
SaaS Security Policy Management	Enforce security standards with customizable policy rules.	Reduce manual effort and ensures consistent security across environments.
Continuous Monitoring and Alerting	Track config and permission changes as they happen.	Detect risky events like new guest users or public file sharing.
Access and Activity Trend Analysis	Get reports on users, roles, apps, and activity trends.	Simplify audits and ensures accountability across teams.
Third-Party Connection Oversight	Monitor and evaluate risk of OAuth apps and bot integrations.	Help prevent breaches from risky third-party access.

Achieve Effective SaaS Security for Slack

Protect sensitive messages, control access, and reduce app risk with visibility and automation purpose-built for Slack environments.

“ We saw the immediate results during the pilot, which is why we ultimately decided to go with AppOmni. In looking at the overall ROI that we were hoping to get from this, AppOmni came out on top.

About AppOmni

AppOmni, the leader in SaaS Security, helps customers achieve secure productivity with their applications. Security teams and owners can quickly detect and mitigate threats using unmatched depth of protection, continuous monitoring, and comprehensive visibility. Trusted by the world's largest enterprises, AppOmni specializes in securing diverse SaaS environments. Learn more at appomni.com. © 2025 All Rights Reserved
