

Posture Scoring

Simplify SaaS security with clear metrics and actionable insights

The Challenge

Managing SaaS security across diverse applications is challenging. Users struggle to identify whether monitored services truly have strong posture. With varying ownership, security SLAs, and priorities, aligning teams and driving effective collaboration can feel overwhelming. Application owners often deprioritize security, making it difficult to incentivize improvements and streamline remediation efforts.

The Solution

AppOmni's Posture Scoring improves SaaS security management by providing a comprehensive risk-weighted posture score for each monitored SaaS service. This metric helps assess overall security posture, benchmark performance, and identify key areas for improvement. By factoring the criticality of findings, Posture Scoring ensures an accurate reflection of risk, empowering teams to focus their efforts on the most impactful issues.

With Posture Scoring, users gain access to clear, proactive informed opinions that streamline remediation efforts and strengthen SaaS security practices. The integration of actionable insights through the API and dashboard provides a seamless experience for addressing critical risks and improving overall posture. Additionally, AppOmni's Monitored Services Overview Dashboard offers interactive out-of-the-box visualizations and drilldowns to evaluate and manage SSPM across services. This helps organizations understand what alerts to prioritize and identify security posture strengths.

By combining comprehensive assessments, strategic reporting, and performance benchmarking, Posture Scoring not only simplifies security evaluations but also validates progress to leadership, helping organizations achieve long-term success in their security strategies.

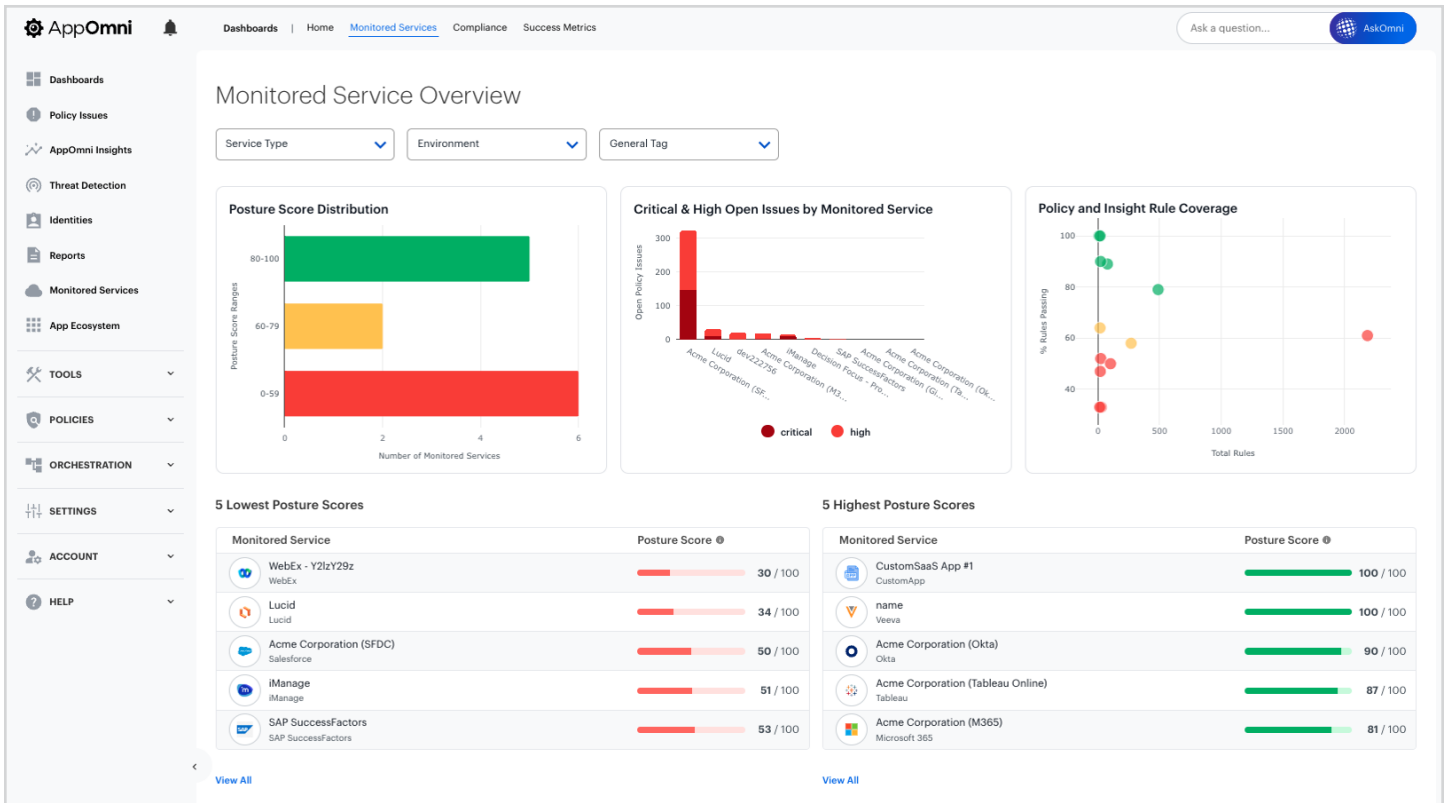

BENEFITS

- Comprehensive security assessment
- Score criticality of findings
- Enhance visibility and SSPM practices
- Leverage actionable recommendations
- Proactive risk management

FEATURES

- Comprehensive risk-weighted score
- Leaderboard visualizations
- Posture score via the monitored service detail API
- Interactive charts feature zoom and drill-down capabilities
- Export capabilities

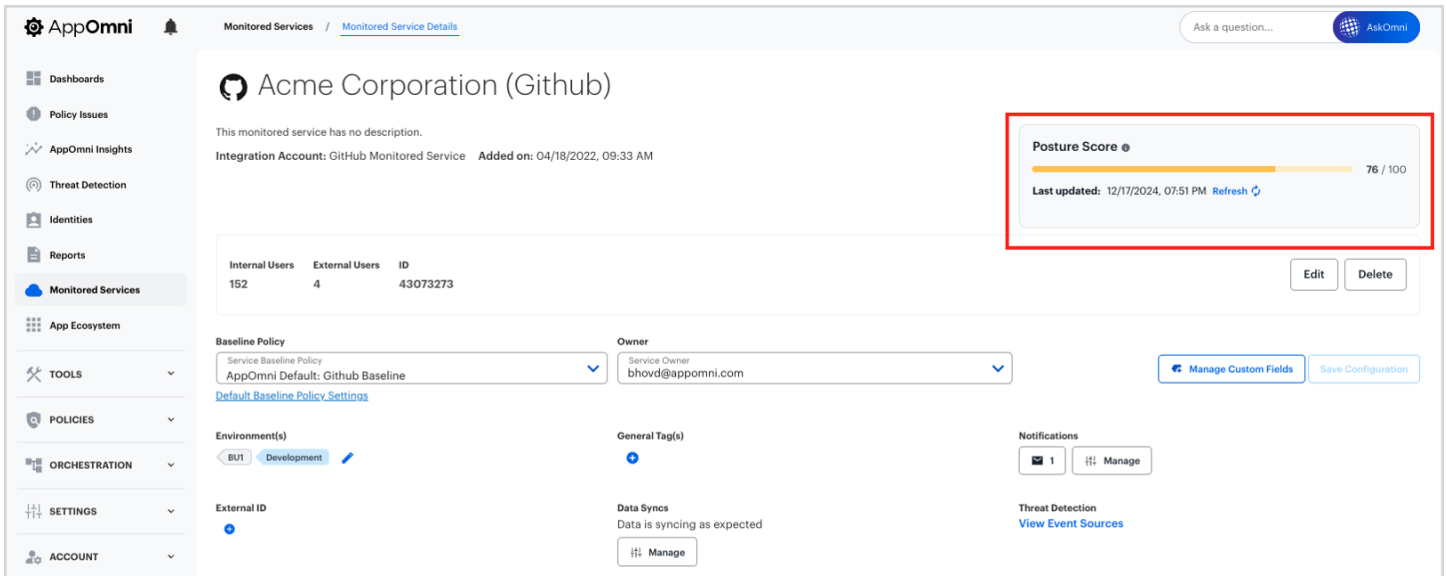

Use the Posture Score Distribution chart to determine which MS are in the “red” or “needs improvement” category

Monitored Services

Status	Service & Type	Posture Score	Open Issues	Users	SaaS-To-SaaS Apps	Actions

Each Monitored Service has a 0-100 risk-weight score that indicates the status of your SSPM

Posture Score is available in the Monitored Service detail page

Feature	Description	In Action
Risk-weighted score	Provides a 0-100 risk-weighted score to assess SaaS security posture and prioritize critical issues.	An international company discovered its Workday application had a Posture Score of 34, indicating it needs to resolve issues and insights to improve its SSPM.
Leaderboard visualizations	Highlight app teams excelling in SSPM and those needing additional guidance	A media company shares a leaderboard with its Microsoft 365 team to give a status update and to look to improve its posture score for the application.
Interactive charts	Visualize and prioritize SSPM to help teams identify and resolve high-impact security gaps.	A financial institution uses the Policy and Insight Rule Coverage chart to see that 75% of its issues and insights are failing in the company's production Salesforce tenant.
Create and share reports	Easily create and share reports by downloading individual visualizations or access posture scores via our API.	A Salesforce admin at a university generates a quarterly report that shows the posture score across all Salesforce instances.
