# Prevent SaaS Breaches

Growing SaaS Complexity Increases Security Risks

SaaS applications are essential for modern businesses but also introduce security challenges. Each app—whether Salesforce, Microsoft 365, or ServiceNow—has unique configurations, permissions, and integration points. This complexity exposes businesses to risks like misconfigurations, data leaks, and unmonitored third-party access.

Strong security controls, detection, and authentication are vital to protect critical data.

Gain Control, Reduce Risk, and Simplify SaaS Security

AppOmni provides a powerful platform that brings **visibility, control, and protection** to your SaaS environment. We help security teams manage the growing complexity of SaaS applications by offering **expert insights, monitoring**, and **automated security checks** to protect your critical business data

AppOmni Insights

AppOmni Insights are potential security risks identified by AppOmni SaaS experts. Read more.

How AppOmni Powers Secure SaaS Operations

Our platform architecture provides the foundation for SaaS visibility, control, and security. Here's how AppOmni integrates into your operations to protect critical data.

AppOmni Protects the Apps That Power Your Business

To learn more, email us at info@appomni.com or visit appomni.com.

> " With AppOmni, we're able to do in a couple of days what used to take us a month. It has drastically sped up our implementation timelines while adding a higher level of security to our clients' implementations.
>
> **Senior Managing Director & Global Security Lead, Accenture**

> " We've seen a reduction in the number of misconfigurations across our SaaS platforms thanks to AppOmni's risk reporting and configuration management. AppOmni has allowed us to be more proactive in addressing security challenges.
>
> **Information Security Director, DLA Piper**

> " Shortly after onboarding, our platform lit up like a Christmas tree. Our SOC and incident response teams activated, receiving alerts directly from AppOmni— before any notification from ServiceNow. This visibility allowed us to triage, assess impact, and minimize risk immediately.
>
> **CISO and Associate Vice President, University of Cincinnati**
